Send Designs to your Machine Wirelessly

No more USB's or cords required! Now you can send embroidery designs from your computer or your iPad directly to your sewing machine using a wireless connection. Smart, Simple, and Convenient.

Smart and Useful iPad Apps

Janome's apps, AcuEdit™ and AcuMonitor™ will bring a whole new dimension to your sewing and embroidery. AcuMonitor™ allows you to watch the progress of the embroidery stitch-outs on your iPad – now you can leave your sewing room without leaving your machine. The AcuEdit™ app lets you design embroidery anywhere, anytime. It includes the full design editing capability of your Horizon Memory Craft 15000 on your iPad. When your design is complete, simply use the machine's wireless connection to transfer.

Advanced PC Connection – Horizon Link Suite™

Even though it's as easy as ever to create and edit designs on the Horizon Memory Craft 15000's giant touchscreen, you can take your editing capabilities ever further! Use your regular computer to edit designs on screen. Easily drag, drop, and edit using a mouse. With Horizon Link, your editing screen is only limited by the screen you hook up to your computer. Plus the Horizon Memory Craft 15000's wireless capability means that you can send designs without hooking the computer up to your machine.

Industry's Largest LCD Touchscreen

Everything is bigger, brighter, and bolder on the Horizon Memory Craft 15000's 9" LCD touchscreen, with 7.7" x 4.7" of design workspace. Edit, design, and create on the wide screen, and view in amazing clarity and 16,000,000 colors.

AcuFil Tool and Hoop

Horizon Link Suite software includes Janome's signature quilting and embroidery design program, AcuFil. The AcuFil tool allows you to easily design embroidered quilting patterns for quilt finishing. It includes a quilt calculator – simply enter the dimensions of your quilt and the program calculates and lays out automatic stippling to perfectly cover your entire quilt top. Choose from many quilting designs for combining and embroidering onto your quilt top. The program allows you to print templates for precise positioning. A special hoop that includes a plastic template and magnetic clamps comes standard with the machine, and allows you to hoop bulky quilt layers with ease.

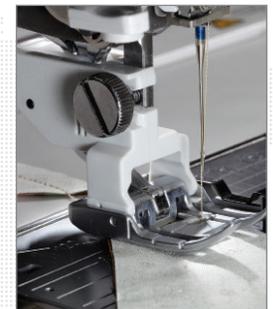

11" to the Right of the Needle

It's our largest bed space ever. Perfect for quilting, home dec, or any project where added space is a must. But it also means that the machine can accommodate a larger hoop, with all of the stability and precision that Janome is known for!

AcuFeed Flex™

Our AcuFeed™: Layered Fabric Feeding System has long been legendary in the sewing and quilting world for its amazing precision and power. The AcuFeed™ Flex system is removable – when not in use, simply store it in one of the ample accessory trays. Adding and removing is easy! AcuFeed™

Flex now comes in two useful options. The two-pronged AcuFeed™ feet advance fabric flawlessly from the top and bottom. Use this system for quilting, seaming, and traditional sewing. Our special one-pronged AcuFeed™ feet give precise control for more detailed work, like installing zippers and matching seams.

Stitch Composer™

The unique Stitch Composer™ program allows you to create and edit stitches from your computer. 100 stitches from the machine are built into the program, or for a truly customized experience, create your own from scratch! The program is easy to use, and transferring stitches to your machine is a snap.

Linear Motion Embroidery™

Janome pioneered the home embroidery market with an X-Y movement in the 1990s with the Memory Craft 8000. As the world's largest manufacturer of industrial desktop robots, we implemented and perfected this technology. This expertise now comes back to sewing, with our state of the art Linear Motion Embroidery™ System. This system uses 3 linear motion guides – two on the X axis, one on the Y – which allows for unrivalled stability and smooth movement, even with our giant GR hoop.

Independent Bobbin Winding Motor

Never run out of full bobbins! The Horizon Memory Craft 15000's independent bobbin winding motor enables you to wind bobbins even while you are sewing. It's the perfect sewing multi-tasker.

Easy Threading Bobbin Case and Cover

The specially designed bobbin case and cover mean there's no need to pull long thread tails up and through when you first thread the machine. Slip the bobbin thread in the cover plate guide; the built in cutting blades trim the tail to the correct length for a super-clean start to your stitching line. After the initial threading, the auto-thread cutter takes care of trimming and re-setting the tails each time.

Bobbin Winder Plate with Cutter

The new bobbin winder plate has five cutting blades. Faster and smoother winding, easy thread cutting, and your bobbin is ready to go!

Auto Presser Foot Lift

The auto presser foot lift automatically lifts the presser foot after a thread cut – when the thread snip button is pressed, or after a programmed thread cut at the end of a row of decorative stitches - allowing you to keep your hands on your project at all times. It can also be set to raise at the end of any seam, with the needle in the down position for easy pivoting. This great feature simplifies the sewing process – you have less manual steps to save time and increase efficiency.

9mm Zig Zag

That's right – you can create 9mm wide stitches on the Horizon Memory Craft 15000! The extra width makes all of your decorative stitches bolder, brighter, and more distinct. Wider, more distinct stitches allow you to fill more area with stitching, quicker - saving you valuable time while sewing.

One Step™ Plate Converter

Using the right tools at the right time is important in sewing. When using lightweight fabrics, or piecing quilts, a straight stitch needle plate makes all the difference. Our One Step™ Plate Converter allows you to easily switch and use the perfect plate for your project. Simply press a button to release one plate; then snap a new one in place – it takes only seconds, with no screwdrivers required! The enhanced plate allows for users to move the needle slightly on the straight stitch plate for scant ¼" seams. This system also includes a sensor that will only allow a straight stitch to be sewn when the Straight Stitch Needle Plate is in place, so you never have to worry about breaking a needle! Both needle plates are included as standard accessories.

Bobbin Thread Sensor

When embroidering or sewing large projects, it is sometimes difficult to keep track of how much bobbin thread is left. The bobbin thread sensor alerts you when your bobbin thread is running low – so you're never caught in the middle of a seam or embroidery color. The Horizon Memory Craft 15000 has an advanced sensor system which allows you to set the level of sensitivity for the alert – customize it for large scale embroidery projects, when you want to make sure you always have plenty of bobbin thread, or small projects with short seams. This feature is also very helpful for sewing with different thread thicknesses. You can increase the sensitivity when using a thick bobbin thread, and lower it for thin threads.

Variable Zig Zag™

Advanced tools give advanced abilities for creative expression. The Horizon Memory Craft 15000 includes a great tool for creativity: Variable Zig Zag™. This feature enables precision control over the stitch width via the knee lift! Thread painters will rejoice at the ease of control of the stitch width. Begin with a straight stitch, then while the machine is still running, press against the knee lifter to widen your stitch to a 9mm zigzag. Release pressure to gradually return to a straight stitch for a tapered finish. Don't

want a 9mm stitch? You can easily control the maximum width of the stitch setting in the machine's set mode. This advanced control opens up amazing new possibilities for creation expression with free motion quilting, thread painting, raw edge appliqué, free motion monogramming, and more.

High Speed Embroidery

The Horizon Memory Craft 15000 stitches at an incredible 1,000 stitches per minute. Janome engineering has allowed this fantastic speed embroidery without compromising stitch quality or precision.

Compact Embroidery Unit

Great design is in the details. Janome engineers have found a way to offer large, solid, professional style

embroidery – and still keep the embroidery unit as compact as possible. No other brand can offer so much embroidery space, with such a small machine foot print. The attachable embroidery unit snaps right into the back of the machine – you don't have to worry about giant sewing spaces to accommodate bulk to the right of the needle! Plus, this innovative embroidery unit placement means you can use the free arm, even when sewing embroidery. It's the kind of smart engineering that Janome owners have long known to expect!

Extra-Large Embroidery Area

Our largest hoops and embroidery area ever! Our GR Hoop offers 9" x 11.8" of embroidery area. The unique design of the GR hoop also includes special magnets that aid in stability. No other machine can offer such a large area, and guarantee the stability and precision of Janome embroidery. Even the legendary Janome Square SQ hoop has expanded, to 9" square, and . That means that you can embroidery 9" quilting squares. The 5.5" square SQ14, AcuFil Quilting and Free Arm hoops also come standard with the machine.

Jump Thread Trimming

With Janome embroidery, simply press "Go"! Don't worry about stopping a design to trim threads. With automatic jump thread trimming, the machine cuts jump threads, allowing you to save time and energy even as you create beautiful, intricate embroidery. The Horizon Memory Craft 15000 includes more options for jump thread trimming, making your embroidery experience even more customizable! After the machine trims the thread, it pulls the thread tail to the back of the embroidery for flawless, professional results.

Cutwork Enabled

The Horizon Memory Craft 15000 has a special cutwork function built directly into the machine. When formatted designs are imported to the machine, the MC15000 displays the embroidery pattern with detailed information, including the proper cutwork needles for insertion. It also

automatically changes the settings for thread sensors and jump thread trimming when a cutwork needle is attached. It's just one more way the Horizon Memory Craft 15000 sets free all of your creative options.

91 Needle Positions

The Horizon Memory Craft 15000 offers an unbelievable 91 needle positions. This allows for more detail in decorative stitches, and incredible fine adjustments in all stitch creation. And with 9mm stitch width, this sort of bold detail can be easily appreciated.

Seeing is Believing!

The Horizon Memory Craft 15000 features a wide variety of amazing light – right where you need it most. Our High Light™ is activated by pulling it forward. The adjustable light provides a beacon that directs light right to the needle, so you can see your stitches with clarity, and needle threading is a breeze. Ten ultra-bright LED lights in five locations illuminate the bed of the machine, providing a dazzling work area. Even the function buttons are illuminated – so they're easy to find and easy to use. For even more focus, the machine includes three special magnifying glasses at three levels of magnification that attach directly to the face plate: slide into place for extra visibility, and store it out of your way when not in use. Together, this system reduces eye strain, and allows you to sew for hours in comfort!

Free Motion Quilting

Finishing your projects from start to finish is a feeling that can't be matched – especially when your project is a quilt! The Horizon Memory Craft 15000 makes free motion quilting easier than ever. Customize the foot height for your project and preference – set it high for a lofty quilt with lots of batting, or low if you like a little drag on your stitches. You can even memorize your setting to use later.

AcuGuide™ Cloth Guide

Now your seam allowances can be as accurate as our precision embroidery system. Simply snap the cloth guide onto the carriage arm of the embroidery mechanism and enter your desired seam allowance. The guide features a long, raised lip, for perfectly guiding your fabric, and seams can be set between $\frac{1}{16}$ " to the left of the needle to $8\frac{1}{4}$ " to the right of the needle. The carriage moves every 0.1mm for finely-tuned settings.

Automatic Presser Foot Pressure

A fabric sensor automatically detects the thickness of fabric, and adjusts the downward pressure placed on the fabric accordingly. This ensures that your fabric never slips, yet moves smoothly and easily as you sew. The presser foot pressure can also be adjusted manually in the setting mode. This allows you to reduce the pressure on thicker fabrics, or to set to your own personal preferences.

Improved Ergonomic Knee Lift

The knee lift has been redesigned to make it ergonomic and adjustable to accommodate sewists of most any size or height. You can now sit directly in front of the needle with the knee lift perfectly positioned for free-motion quilting, variable zig zag, or general sewing.

More Stitches, More Built-in Embroidery!

The Horizon Memory Craft 15000 includes an amazing array of built-in stitches and embroidery designs. You'll find 500 built-in stitches, including 13 different styles of buttonholes (and with Stitch Composer your stitch count is infinite). Three fonts provide variety for decorative stitch monogramming. 480 built-in embroidery designs are standard, including Designer Collections and an amazing array of designs from around the world. The monogramming capabilities are better than ever, with 10 monogramming fonts, and 2&3 letter options. With so many standard stitch and embroidery designs your creativity is unlimited!
